

# GENERATION PGM

## *News Brief*

### Marathon Project Update

GenPGM is very happy to share that we have reached another important milestone in the Environmental Assessment process.

On November 12, 2021 GenPGM submitted responses to the most recent information requests we received from the joint review panel. The additional information included in these responses touched on topics such as waste management, water quality, biophysical components and Indigenous considerations. The information has been posted on the IAAC registry and is available for public to review.

The panel must now review these responses and determine if there is sufficient information to allow the public hearings to proceed.

We look forward to moving ahead with the hearings and receiving government approval for the construction and operations of the Marathon Palladium and Copper Project in the coming months.

**Thank you for your ongoing participation and support for the Project. We appreciate your feedback! Please contact us any time with your comments or questions.**
