

GENERATION PGM

News Brief

Completion of 2021 Exploration Program

Generation PGM Inc. (GenPGM) has recently completed the 8,000m exploration drill program that started in May 2021. The program included 7 drill holes in the Central Feeder Zone and 11 drill holes in the Chonolith Zone. We are eager to receive our outstanding assays to provide an update of our finalized 2021 exploration drill program results.

GenPGM has also been completing a regional surface mapping and prospecting program as well as trench mapping. The efforts conducted by the surface exploration crew focussed on the Sally Deposit, Boyer Prospect and Four Dams Prospect with minor followup work in the Marathon Deposit. We look forward to providing a compilation on the surface results.

On Thursday October 14, Generation PGM will be hosting an information session in Thunder Bay! Join the Thunder Bay Community Economic Development Commission and Generation Mining for an evening to learn about the Marathon Palladium Copper Project.

Chief Operating Officer Drew Anwyll and Senior Exploration Geologist John McBride will be presenting information on the following:

- Environmental Permitting
- Geology and Exploration
- Feasibility and Project Design

This event is free to attend but you must register to ensure COVID-19 capacity requirements are met.
